App Kit — ship a polished app

@lacspace/markdown

Markdown -> HTML, safe

v1.0.0 · zero dependencies · isomorphic · generated 2026-09-01

Overview

Everything a blog or docs page needs — headings with anchor ids, nested & task lists, fenced code, blockquotes, GFM tables, images and links — rendering to clean HTML with source HTML escaped by default. Includes `extractHeadings()` for a table of contents. It's what the blog template in `create-lacspace-app` uses.

NOTE

When to use — Rendering Markdown to HTML for a blog or docs site, with a table-of-contents extractor, without a heavy parser.

Package: `@lacspace/markdown` · v1.0.0

Kit: App Kit — ship a polished app

Runtime: zero dependencies · isomorphic

Install

```
npm i @lacspace/markdown
```

Quick example

```
markdownToHtml(post)
```

Returns: "`<h1 id=...>...`"

Key API

markdownToHtml(md, opts) Markdown -> HTML string.

extractHeadings(md) Heading outline for a TOC.

slugify(text) GitHub-style anchor slug.

Tips & warnings

TIP

Use ``headingOffset: 1`` when the page already has an `<h1>`, so document ``#`` becomes `<h2>`.

TIP

``extractHeadings(md)`` gives you ``{ level, text, id }[]`` for an on-this-page menu; ``slugify()`` matches the anchor ids.

TIP

Pair it with the ``blog`` and ``docs`` templates in `create-lacspace-app` for a complete content site.

TIP

Zero-dependency and isomorphic — safe to import on the server, in the browser, on the edge and in React Native. It tree-shakes, so you only ship what you import.

WARNING

Raw HTML in the source is **escaped**, not passed through — this is a safety feature. If you need embedded HTML, sanitize and inject it yourself.
