App Kit — ship a polished app

@lacspace/ui

React kit that feels alive

v1.0.0 · React peer dep · nothing else · generated 2026-09-01

Overview

Scroll reveals, animated counters, gradient text, tilt cards, marquees, a typewriter and a ?K command palette — no animation library, no CSS import. Every component respects prefers-reduced-motion and takes a className, so it drops into any Tailwind + Next.js app. React is the only peer dependency.

NOTE

When to use — Adding motion and interactive polish to a React/Next.js app without pulling in a heavy animation library or a separate command-palette package.

Package: @lacspace/ui · v1.0.0

Kit: App Kit — ship a polished app

Runtime: React peer dep · nothing else

Install

```
npm i @lacspace/ui
```

Quick example

```
<Reveal><Counter value={12480} /></Reveal>
```

Returns: **animated on view**

Key API

<Reveal> / **<Counter>** / **<GradientText>** Scroll-reveal, count-up and gradient text.

<TiltCard> / **<Marquee>** / **<Typewriter>** Micro-interactions and motion.

<CommandPalette> + **useInView()** ?K palette and the IntersectionObserver hook.

Tips & warnings

TIP

The package ships "use client", so you can import it directly into Server Components.

TIP

Everything honours "prefers-reduced-motion" automatically — no extra work for accessibility.

TIP

Mount "<CommandPalette items={...} />" once in your layout; it opens on ?K / Ctrl-K.

WARNING

React is a peer dependency — it uses your app's React, so there's no duplicate-React risk, but React ? 18 is required.
