Data Kit — export & parse

@lacspace/xlsx

Excel export, zero-dep

v1.0.0 · zero dependencies · isomorphic · generated 2026-09-01

Overview

Write real .xlsx files with zero dependencies and no headless browser — a spreadsheet is just a ZIP of XML, so we build the bytes directly (same trick as @lacspace/pdf). Objects or arrays, correct types incl. real Excel dates, bold headers, column widths and multiple sheets. SheetJS/exceljs are heavy; this is tiny and isomorphic.

NOTE

When to use — Exporting real `xlsx` spreadsheets (correct types, dates, multiple sheets) without SheetJS/exceljs.

Package: @lacspace/xlsx · v1.0.0

Kit: Data Kit — export & parse

Runtime: zero dependencies · isomorphic

Install

```
npm i @lacspace/xlsx
```

Quick example

```
jsonToXlsx(rows)
```

Returns: **Uint8Array** (.xlsx)

Tips & warnings

TIP

Pass an array of objects; headers, column widths and Excel-native dates are handled for you.

TIP

Zero-dependency and isomorphic — safe to import on the server, in the browser, on the edge and in React Native. It tree-shakes, so you only ship what you import.
